Types of Practice Problems in Prentice Hall Geometry 13 6

1. Similar Figures and Ratios

These problems require students to determine whether two figures are similar and, if they are, to find the scale factor or missing side lengths.

2. Proving Similarity

Students are asked to apply similarity criteria—such as AA (angle-angle), SAS (side-angle-side), and SSS (side-side-side)—to prove that two triangles are similar.

3. Coordinate Geometry and Transformations

Problems involve performing and analyzing transformations like translations, rotations, reflections, and dilations on coordinate planes.

4. Applying Scale Factors

Questions focus on calculating scale factors in dilations and applying them to find corresponding lengths, areas, and volumes.

5. Word Problems and Real-World Applications

These problems synthesize concepts into real-world contexts, requiring critical thinking and application skills.

Strategies for Solving Practice Problems

1. Carefully Read the Problem

- Identify what is given and what needs to be found. - Note any diagrams, measurements, or specific conditions.

2. Draw and Label Diagrams

- Use accurate sketches to visualize the problem. - Label all known lengths, angles, and points.

3. Recall Relevant Theorems and Properties

- Review similarity criteria (AA, SAS, SSS). - Remember properties of transformations and dilations.

4. Set Up Equations and Ratios

- Use proportions based on similarity ratios. - Write equations relating known and unknown quantities.

5. Solve Systematically

- Simplify equations step-by-step. - Check for extraneous solutions or errors.

6. Verify Your Solution

- Confirm that the answer makes sense within the problem's context. - Use alternative methods if necessary.

Sample Practice Problems with Solutions

Problem 1: Determining Similarity

Two triangles have angles measuring 35° , 65° , and 80° , and 70° , 40° , and 70° , respectively. Are the triangles similar? Explain your reasoning.

Solution:

- Check the angles: Triangle 1 has angles 35° , 65° , 80° . Triangle 2 has

70° , 40° , 70° . - Since the sums of angles in both triangles are 180° , but the angles do not match, check for similarity. - Use the AA criterion: - Triangle 2 has two angles measuring 70° and 40° . The third angle is 70° . - Triangle 1 has no angles matching these exactly, so the triangles are not similar based on AA because the corresponding angles do not match. Answer: The triangles are not similar because their corresponding angles are not equal.

Problem 2: Proving Triangle Similarity Using SSS

Sides of triangle ABC are 6 cm, 8 cm, and 10 cm. Triangle DEF has sides 9 cm, 12 cm, and 15 cm. Are triangles ABC and DEF similar? Justify your answer.

Solution:

- Find the ratios of corresponding sides: - $6/9 = 2/3$ - $8/12 = 2/3$ - $10/15 = 2/3$ - Since all three ratios are equal, the triangles are similar by SSS similarity criterion. Answer: Yes, triangles ABC and DEF are similar because their corresponding sides are in proportion with a ratio of 2:3.

Problem 3: Applying Dilations and Scale Factors

A triangle has vertices at A(2, 3), B(4, 7), and C(6, 3). It is dilated from the origin with a scale factor of 2. What are the coordinates of the vertices of the image triangle?

Solution:

- For each vertex, multiply the x and y coordinates by 2: - $A(2, 3) \rightarrow (2 \times 2, 3 \times 2) = (4, 6)$ - $B(4, 7) \rightarrow (4 \times 2, 7 \times 2) = (8, 14)$ - $C(6, 3) \rightarrow (6 \times 2, 3 \times 2) = (12, 6)$ Answer: The dilated triangle has vertices at (4, 6), (8, 14), and (12, 6).

Problem 4: Coordinate Transformation (Rotation)

Rotate triangle PQR with vertices P(1, 2), Q(3, 4), and R(5, 2) 90° clockwise about the origin. Find the new coordinates of each vertex.

Solution:

- Rotation of 90° clockwise: $(x, y) \rightarrow (y, -x)$ - $P(1, 2) \rightarrow (2, -1)$ - $Q(3, 4) \rightarrow (4, -3)$ - $R(5, 2) \rightarrow (2, -5)$ Answer: After rotation, the vertices are at (2, -1), (4, -3), and (2, -5).
