Detailed Overview of Major Non-Traditional Machining Processes

Electric Discharge Machining (EDM)

EDM is a thermal process where material is eroded from the workpiece by spark discharges between an electrode (tool) and the workpiece submerged in a dielectric fluid. It is ideal for hard metals and achieves high precision. - Working Principle: Controlled electrical sparks generate localized high temperatures, melting and vaporizing material. - Applications: Die and mold manufacturing, aerospace components, intricate micro-machining. - Advantages: - Capable of machining hard materials - Produces complex shapes - High dimensional accuracy - Limitations: - Only conductive materials can be machined - Surface finish depends on process parameters - Tool wear can be significant

Laser Beam Machining (LBM)

LBM uses a focused laser beam to melt, burn, or vaporize material from the workpiece surface. - Working Principle: High-energy laser beam is directed onto the workpiece, causing localized heating. - Applications: Micro-drilling, cutting of metals, ceramics, and polymers. - Advantages: - Non-contact process - Suitable for remote and automated operations - Capable of micro and nano-scale machining -

Limitations: - High equipment cost - Possible thermal damage to surrounding material - Limited to absorptive materials

Ultrasonic Machining (USM)

USM employs high-frequency vibrations of an abrasive tool against the workpiece, which causes material removal through micro-chipping. - Working Principle: Abrasives in a slurry are driven by ultrasonic vibrations, eroding the workpiece. - Applications: Glass, ceramics, composites, and brittle materials. - Advantages: - No thermal damage - Suitable for brittle and hard materials - Produces smooth surface finishes - Limitations: - Slow material removal rate - Limited to specific materials

Water Jet Machining (WJM)

WJM uses a high-pressure jet of water, often mixed with abrasives, to cut materials. - Working Principle: High-velocity water stream erodes the workpiece. - Applications: Cutting metals, stone, glass, composites. - Advantages: - No heat-affected zone - Can cut thick and large workpieces - Environmentally friendly - Limitations: - Lower precision compared to other processes - Requires high-pressure pumps
