Sample Economics Grade 11 Questions with Model Answers

Providing practice questions and model answers can enhance understanding.

Question 1: Define scarcity and explain its significance in economics.

Model Answer: Scarcity refers to the fundamental economic problem of having limited resources to meet unlimited human wants. It is significant because it forces individuals and societies to make choices about how to allocate resources efficiently, prioritizing some needs over others. Scarcity leads to the need for economic decision-making, resource management, and the study of how societies optimize resource use.

Question 2: Draw a demand and supply diagram showing market equilibrium. Explain what causes shifts in demand and supply curves.

Model Answer: [Insert a neatly labeled diagram with demand and supply curves intersecting at equilibrium price and quantity.]

Shifts in demand can be caused by factors such as changes in consumer income, preferences, prices of related goods, or expectations about future prices. An increase in demand shifts the demand curve rightward, raising both equilibrium price and quantity. Conversely, a decrease shifts it leftward.

Shifts in supply result from changes in production costs, technology, taxes, or subsidies. An increase in supply shifts the supply curve rightward, lowering the equilibrium price and increasing quantity. A decrease shifts it leftward, resulting in higher prices and lower quantities.

Question 3: Discuss the impact of inflation on consumers and producers.

Model Answer: Inflation erodes the purchasing power of consumers, making goods and services more expensive over time, which can reduce their standard of living if wages do not increase proportionally. For producers, inflation can increase costs of inputs and wages, potentially squeezing profit margins. However, moderate inflation may encourage spending and investment. Unpredictable inflation can create economic uncertainty, deterring long-term planning and savings.
