Among the internationally recognized standards, BS EN 22553 plays a crucial role in defining the weld symbols used in technical drawings within the UK and Europe. Understanding these symbols ensures precise communication between designers, engineers, and welders, leading to high-quality welds and efficient fabrication processes. In this comprehensive guide, we will delve into the BS EN 22553 weld symbols, explaining their significance, how to read and interpret them, and best practices for applying them in your projects.

## Overview of BS EN 22553 Standard

### What is BS EN 22553?

BS EN 22553 is a European Standard that specifies the graphical symbols used for welding, including the detailed representations of weld types, sizes, and additional information. The standard aims to harmonize welding symbols across Europe, ensuring consistency and clarity in technical drawings. This standard is part of a series that covers various aspects of welding symbols, but BS EN 22553 specifically focuses on the graphical representation of welds, making it an indispensable resource for engineers, draftspersons, and welders.

### Scope and Application

The BS EN 22553 standard applies to: - Structural steelwork - Mechanical engineering components - Fabrication drawings for welded assemblies - Certification of welded joints It provides a comprehensive set of symbols and rules for depicting different types of welds, weld sizes, weld lengths, and additional instructions, facilitating effective communication across the manufacturing process.

## Understanding the Components of BS EN 22553 Weld Symbols

Weld symbols under BS EN 22553 are composed of various elements that convey specific information about the welds. Familiarity with these components is key to interpreting and applying the symbols correctly.

### Basic Elements of a Weld Symbol

The main components include: - Welding symbol (arrow and reference line) - Basic weld symbol (shapes indicating weld type) - Supplementary symbols (indications for weld size,

length, contour, and finish) - Tail (optional, used for additional instructions or standards references)

## The Welding Symbol and Reference Line

- The reference line is a horizontal line representing the weld to be made. - An arrow points from the reference line to the joint where the weld is required. - The position of the weld symbol in relation to the reference line indicates whether the weld is to be made on the arrow side or the other side of the joint.

## Arrow Side and Non-Arrow Side

- The arrow side (or "side A") is where the arrow points. - The other side (or "side B") is opposite the arrow. - Symbols placed below the reference line indicate welds on the arrow side; symbols above indicate welds on the non-arrow side.

## Types of Weld Symbols as per BS EN 22553

The standard defines various basic weld types, each represented by specific graphical symbols.

## Common Basic Weld Symbols

- Fillet Weld: A triangular symbol indicating a weld that joins two surfaces at a right angle. - Groove Weld: Symbols representing different groove weld types such as V-groove, bevel, U-groove, and square groove. - Edge Weld: For welding along the edge of a plate or section. - Spot and Plug Welds: Represented by circles or other specific symbols. - Surfacing Weld: For applying weld metal on a surface for reinforcement or corrosion protection.

## Adding Details to Weld Symbols

BS EN 22553 allows for additional information to be added to the basic symbols to specify details such as size, length, contour, and finishing.

## Weld Size and Length

- Weld Size: Usually indicated next to the weld symbol with a dimension (e.g., 6 mm). - Weld Length: Shown as a series of short dashes or a specific length measurement. - Number of

Welds: When multiple welds are required, numbers are used to specify how many.

## Contour and Profile Symbols

Additional symbols specify the desired weld profile: - Flat: No additional symbol. - Concave: A curved line below the reference line. - Convex: A curved line above the reference line. - Other profiles: Beveled, flush, or miscellaneous contours.

## Finish Symbols

Symbols indicating surface finish requirements: - Grind finish: A check mark. - Brush finish: A zigzag line. - Rough finish: Wavy line.

## Using the Tail and Additional Instructions

The tail of the weld symbol can include: - References to standards (e.g., BS EN 22553) - Welding process instructions - Specific notes or instructions for the welder Additional symbols or notes can be added in the tail to clarify special requirements or procedures.

## Interpreting and Applying BS EN 22553 Weld Symbols in Drawings

## Structure and Components of BS EN 22553 Weld Symbols

Understanding the structure of BS EN 22553 weld symbols is vital for accurate interpretation. The symbols comprise various elements, each conveying specific information about the weld.

### Basic Components

- Arrow Line: Connects the reference line to the welding symbol, indicating the side of the joint where the weld is applied. - Reference Line (or Lead Line): The horizontal line that holds the various symbols and details. - Tail: Optional section extending from the reference line, used to include supplementary information such as welding process, notes, or standards.

### Symbol Elements

- Weld Type Symbol: Graphical representation of the type of weld (e.g., fillet, groove, plug). - Weld Size: Numerical value indicating the weld's dimensions. - Weld Length: Usually specified in the form of a number or range. - Contour Symbols: Denote the shape or profile of the weld (e.g., flush, convex, concave). - Preparation Symbols: Indicate surface preparations such as grinding, machining, or cleaning. - Finish Symbols: Show surface finish requirements, like grinding or polishing. - Inspection and Testing Symbols: Represent non-destructive testing (NDT) or other quality checks.

## Types of Weld Symbols in BS EN 22553

The standard encompasses a comprehensive set of symbols to depict various welding techniques:

### Common Weld Types

- Fillet Welds: Represented by a right-angled triangle symbol. - Groove Welds: Symbols indicating V, bevel, U, J, or double-V welds. - Plug and Slot Welds: Circular or elongated symbols denoting welds filling holes or slots. - Surfacing Welds: Indicated by a specific symbol for surface overlays. - Combined Welds: Symbols combining features of different weld types.

## Specialized Symbols

- Backing Welds: To support or reinforce the main weld. - Seam Welds: For continuous welding along joints. - Plug or Slot Welds: For filling holes or slots in components. - Spot Welds: Used in sheet metal assembly. Each type has a standardized graphical representation, often supplemented with additional details like size and length.

## Interpreting and Applying BS EN 22553 Weld Symbols

The effective use of weld symbols hinges on proper interpretation. Here's a step-by-step approach:

### Step 1: Identify the Reference Line

- Located horizontally on the drawing. - The arrow points to the joint, indicating which side the weld applies to.

### Step 2: Read the Arrow Side and Non-Arrow Side

- The side of the joint where the arrow points is called the "arrow side." - The opposite side is the "other side." - Weld symbols or instructions placed above or below the reference line specify the welds on respective sides.

### Step 3: Interpret the Symbol Elements

- Recognize the graphical representation of the weld type. - Check for numerical values indicating size, length, or spacing. - Look for additional symbols for contour, preparation, or finish.

### Step 4: Review the Tail for Additional Notes

- Contains supplementary instructions, standards, or specifications. - May specify welding process, electrode type, or inspection requirements.

### Step 5: Confirm and Cross-Reference

- Ensure all symbols are consistent with project standards. - Cross-check with specifications or welding procedure specifications (WPS).

## Practical Examples of BS EN 22553 Weld Symbols

To illustrate, consider these common examples:

### Example 1: Fillet Weld on Arrow Side

- Symbol: A right-angled triangle below the reference line. - Size: 6 mm (indicated above or below the symbol). - Contour: Convex (indicated by a specific symbol). - Application: Weld

applied on the arrow side, with a 6 mm fillet weld.

## **Example 2: Groove Weld on Non-Arrow Side**

- Symbol: V-groove indicated above the reference line. - Size: 10 mm. - Preparation: Machined or ground surface indicated in the tail. - Application: Groove weld on the non-arrow side, with specific size.

## **Example 3: Plug Weld with Inspection Notes**

- Symbol: A circle with a line through it. - Diameter: 12 mm. - Additional Note: NDT required, specified in the tail. - Application: Filling holes or slots with a plug weld, inspected per standards.

## **Standards and Codes Complementing BS EN 22553**

While BS EN 22553 provides a robust framework, it often works in tandem with other standards: - ISO 2553: The international equivalent, serving as the basis for BS EN 22553. - EN 1090: For structural steel work, including welding requirements. - BS EN ISO 15614: Welding procedure qualification. - ASME Section IX: For welding in pressure vessels and piping, often cross-referenced. Understanding these interconnected standards enhances the application and compliance of weld symbols.
