Credit Risk Assessment Models and Tools

Quantitative Models

The handbook discusses various models used to quantify credit risk, including: - Credit scoring models: Used primarily for retail and small business lending - Structural models: Like the Merton model, assessing default probability based on asset value fluctuations - Credit risk rating systems: Internal rating grades based on a combination of qualitative and quantitative factors Features: - Offer systematic and repeatable risk assessments - Facilitate automation in credit decision processes Limitations: - Require substantial data and validation - May oversimplify complex borrower profiles
