Goodenough Draw a Person Test Scoring: A Comprehensive Guide

Goodenough draw a person test scoring is a widely recognized psychological assessment tool used to evaluate a child's developmental and cognitive functioning through their drawing skills. This test provides valuable insights into a child's self-perception, emotional state, and developmental level. Proper scoring is essential to interpret the results accurately and to understand the underlying psychological or developmental issues that may be present. This article offers a comprehensive overview of the Goodenough Draw a Person Test scoring system, including its methodology, scoring criteria, interpretation, and practical applications. Understanding the Goodenough Draw a Person Test

What Is the Goodenough Draw a Person Test? The Goodenough Draw a Person Test, developed by Florence Goodenough in 1926, is a projective assessment where children are asked to draw a human figure. The simplicity and universality of drawing a person make it an effective measure of visual-spatial skills, developmental maturity, and emotional health.

Purpose of the Test - Assess cognitive development - Detect emotional or psychological issues - Monitor developmental progress over time - Identify possible learning disabilities or mental health concerns

Who Uses This Test? - Psychologists - School counselors - Child psychiatrists - Educational specialists

The Scoring System for Goodenough Draw a Person Test

Basic Principles of Scoring

The scoring system evaluates the child's drawing based on specific features and details. Each element reflects aspects of their developmental stage,

emotional state, or cognitive abilities. Common Scoring Criteria

The original scoring method by Florence Goodenough involves analyzing specific features such as: - Head: Presence and detail - Facial features: Eyes, nose, mouth - Body: Torso, limbs - Hands and feet - Clothing and accessories - Proportions and symmetry Over

time, various scoring systems have been developed, refining these criteria to improve reliability and validity. Step-by-Step Guide to Scoring the Draw a Person Test 1. Preparation - Ensure the child's drawing is complete and clear. - Familiarize yourself with the scoring manual or criteria. - Understand the child's age, as developmental norms vary. 2. Evaluation of Drawing Features

Assess each feature systematically: - Head: Is it proportionally appropriate? Are facial features included? Are they detailed? - Facial Features: - Eyes: Are they drawn? How many? Are they expressive? - Nose: Is it present? Is it proportionate? - Mouth: Is it

expressive? Smiling or neutral? - Body and Limbs: - Is the torso depicted? - Are arms and legs proportionate and correctly positioned? - Are hands and feet detailed? - Clothing and Accessories: - Are clothes drawn? - Are accessories included? (e.g., hair, hats) - Proportions and Symmetry: - Is the figure symmetrical? - Are proportions age-appropriate? 3. Assigning Scores Using a

standardized scoring manual, assign points or ratings based on the presence and quality of features. For example: | Feature | Scoring Criteria | Points | |||| | Head inclusion | Drawn and proportionate | 0-2 | | Facial features | All present, detailed, proportional | 0-3 | | Arms and legs | Both drawn, proportionate, correctly positioned | 0-2 | | Hands and feet | Fully drawn, detailed | 0-2 | | Clothing and accessories | Included and detailed | 0-1 | | Symmetry and proportions | Age-appropriate, symmetrical | 0-2 | (Note: Actual scoring criteria may vary depending on the scoring manual used.)

4. Summing the Scores Calculate the total score by adding individual feature scores. The total score indicates the child's developmental or emotional status. Interpreting the Scoring

Results Norms and Age-Related Expectations Interpret the total score relative to age norms. Typically, higher scores suggest more advanced developmental levels, while lower scores may indicate developmental delays or emotional disturbances. Developmental Stages - Early childhood (3-5 years): Simplified figures with basic features - Middle childhood (6-8 years): Increasing detail, proportionate features - Older children (9+ years): More detailed, realistic figures Indicators of Emotional or Psychological Issues Certain features or lack thereof may reflect psychological concerns: - Omission of facial features or limbs - Unusual proportions - Lack of detail or distortion - Omission of clothing or accessories - Overall simplicity beyond age expectations Limitations of the Test - Subjectivity in scoring - Cultural differences affecting drawing style - Not a standalone diagnostic tool; should be used in conjunction with other assessments Practical Applications and Considerations Clinical Use - Assessing emotional well-being - Monitoring progress over therapy - Screening for developmental delays Educational Settings - Identifying students needing additional support - Tailoring educational interventions Research Purposes - Studying developmental patterns - Investigating correlations between drawing and psychological states Best Practices for Scorers - Use standardized scoring manuals - Ensure scoring is blind to avoid biases - Consider cultural and individual differences - Combine with other assessment tools for comprehensive evaluation Advancements and Modern Approaches Digital Scoring and Analysis Recent developments include digital tools that assist in scoring, providing more objective and consistent assessments. Integrating with Other Assessments Combining the Goodenough Draw a Person Test with: - Cognitive tests - Behavioral assessments - Interviews and questionnaires to form a holistic view of the child's functioning. Conclusion Goodenough draw a person test scoring remains a valuable, straightforward method for gaining insights

into a child's developmental and emotional status. Proper understanding and application of the scoring system are essential for accurate interpretation. While it offers useful preliminary information, it should be integrated with comprehensive assessments to inform diagnosis, intervention, and support strategies. Continuing advancements in scoring methods and digital analysis promise to enhance the reliability and utility of this timeless assessment tool. References - Goodenough, F. (1926). Goodenough Draw a Person Test Scoring: An In-Depth Analysis of Its Methodology, Interpretation, and Clinical Utility The Goodenough Draw a Person Test (DAP) has long stood as a prominent projective assessment tool used to gauge a child's cognitive development, emotional state, and personality traits through their drawing abilities. Since its inception by Dr. Florence Goodenough in 1926, the test has evolved into a widely recognized instrument in psychological evaluation, particularly in pediatric psychology and educational psychology. Central to its application is the scoring system, which transforms artistic representations into quantifiable data, offering clinicians and educators insights into a child's developmental level. This article delves into the intricacies of Goodenough Draw a Person Test scoring, exploring the

methodology, interpretation nuances, strengths, limitations, and contemporary relevance.

Understanding the Goodenough Draw a Person Test

Historical Background and Purpose

The Goodenough Draw a Person Test was initially developed as a quick and straightforward method to assess children's intellectual functioning. Unlike traditional IQ tests, the DAP emphasizes visual-motor integration and perceptual development, making it especially suitable for children who may have difficulty with verbal assessments or language barriers. The test involves instructing a child to draw a human figure on paper, typically with minimal guidance beyond "Please draw a person." The simplicity and engagement inherent in the task make it accessible across diverse populations, fostering its sustained popularity over nearly a century.

Core Principles and Assumptions

At its core, the DAP operates on the premise that a child's drawing reflects their developmental level, emotional state, and personality characteristics. The underlying assumption is that as children grow and develop cognitively and emotionally, their drawings become more detailed, proportionate, and complete. Conversely, drawings that are simplistic or incomplete may signal developmental delays or emotional difficulties.

Scoring the Goodenough Draw a Person Test

Overview of the Scoring System

Scoring the DAP involves evaluating the child's drawing based on specific criteria that correlate with developmental milestones. The most widely used scoring method was developed by Goodenough herself and later refined by other psychologists, notably Goodenough and Harris (1938). The scoring process transforms qualitative features into quantitative scores, enabling comparisons across age groups and clinical populations. Key features assessed in the scoring include:

- Head and Face: Presence of a face, eyes, nose, mouth, ears, and hair.
- Body and Limbs: Inclusion and completeness of the torso, arms, hands, legs, and feet.
- Proportions and Symmetry: Appropriateness of limb placement and size relative to the head and body.
- Details and Complexity: Addition of clothing, facial expressions, and other details.

Scoring is typically performed by assigning points for each feature present and correctly drawn, with higher scores indicating more advanced developmental levels.

Step-by-Step Scoring Procedure

1. Preparation: Obtain the child's drawing on a standardized sheet of paper, ensuring it is legible and complete.
2. Feature Checklist: Use a scoring manual or checklist that details the features to be assessed.
3. Feature Evaluation: Examine the drawing carefully, marking whether each feature is present and accurately depicted.
4. Point Allocation: Assign points based on the presence, accuracy, and complexity of features. For example: - Head present: 1 point -

Face with eyes, nose, mouth: 1 point each - Arms and legs drawn with hands and feet: 1 point each - Proportional limbs: additional points - Clothing and other details: bonus points 5. Total Score Calculation: Sum all points to arrive at the child's raw score. 6. Age-Adjusted Scoring: Compare the raw score with normative data for the child's chronological age to interpret developmental status.

Interpreting the Scores

Normative Data and Developmental Benchmarks

Interpretation hinges on comparing the child's score to normative data derived from large samples of children across different age groups. Norms are typically organized into age-specific percentiles, allowing practitioners to determine whether a child's drawing skills are typical, below average, or above average for their age. For example: - Average score for 5-year-olds: 8-10 points - Below average: Less than 7 points - Above average: More than 10 points Scores significantly below the age norm may suggest developmental delays, emotional disturbances, or cognitive impairments, whereas higher scores often indicate advanced development.

Developmental and Clinical Interpretations

- Developmental Level: The score reflects the child's current cognitive and perceptual maturity. - Emotional State: Extremely simplistic or fragmented drawings may hint at emotional distress or trauma. - Personality Traits: Overly detailed or elaborate

drawings could suggest certain personality characteristics, such as perfectionism or anxiety. It's crucial to interpret the scores within a broader assessment context, considering other psychological tests, interviews, and behavioral observations.

Factors Influencing Goodenough Draw a Person Test Scores

Child's Age and Developmental Stage

The primary factor in scoring interpretation is the child's age. Naturally, younger children tend to produce less detailed drawings, with complexity increasing with age. Therefore, age-appropriate benchmarks are essential for accurate interpretation.

Motor Skills and Fine Motor Development

Children with motor impairments or developmental coordination disorders may generate simpler drawings not due to cognitive deficits but due to motor limitations.

Emotional and Psychological Factors

Stress, anxiety, depression, or trauma can adversely affect a child's willingness or ability to produce detailed drawings, potentially skewing scores.

Environmental and Cultural Influences

Cultural background may influence drawing styles, symbols, and emphasis on certain features, which should be considered during scoring and interpretation.

Drawing Experience and Instructions

Prior exposure to drawing or art activities can impact the quality of the drawing. Additionally, the clarity of instructions given to the child can influence the outcome.

Strengths and Limitations of the Goodenough Draw a Person Test Scoring

Strengths

- Simplicity and Speed: The test is quick to administer and score, making it practical in various settings. - Non-Verbal Nature: Suitable for children with language barriers or speech difficulties. - Developmental Insights: Provides a visual reflection of developmental progress. - Engaging for Children: The drawing task is generally well-received and less intimidating than formal cognitive tests.

Limitations

- Subjectivity in Scoring: Despite standardized checklists, some degree of subjective judgment remains, especially in assessing details or proportionality. - Cultural Bias: Drawing styles and

interpretations may vary across cultures, affecting validity. - Limited Diagnostic Specificity: The test cannot diagnose specific conditions but only provides developmental or emotional indications. - Influence of Art Skills: Artistic talent or familiarity with drawing can influence scores independently of developmental level. - Potential for Faking or Evasion: Children may intentionally produce simplistic drawings to conceal emotional distress or developmental issues.

Advancements and Contemporary Relevance

While the Goodenough Draw a Person Test remains in use, modern psychological assessments often supplement it with other standardized measures, interviews, and observational data. Advances in neuropsychological testing have led to more sophisticated tools, but the DAP's simplicity maintains its value, particularly in resource-limited settings or preliminary screenings. Emerging trends include: - Integration with digital drawing tools for more precise analysis. - Combining DAP scores with other projective tests like the House-Tree-Person (HTP) or Kinetic Family Drawing (KFD). - Using computer-assisted scoring algorithms to reduce subjectivity.

Conclusion

The Goodenough Draw a Person Test scoring remains a foundational component in child developmental assessment, offering a window into a child's cognitive and emotional world through their drawings. Its scoring system, grounded in observable features and developmental milestones, allows practitioners to quantify visual-motor development and infer broader psychological

insights. While it has limitations, its ease of use, non-verbal nature, and developmental relevance ensure its continued relevance in clinical and educational contexts. As with all assessment tools, the DAP's scores should be interpreted within a comprehensive evaluation framework, considering cultural, emotional, and environmental factors to ensure accurate and meaningful insights into a child's growth and well-being.
