Sample Practice Question and Explanation

To illustrate the value of practice questions, here's an example typical of the CRRN exam:

Question: A 45-year-old patient with a recent stroke is experiencing difficulty with mobility and balance. Which of the following interventions is most appropriate to enhance their safety during ambulation?

A) Encourage the patient to walk unaided to build strength
B) Use a gait belt and assistive device during ambulation
C) Limit walking to prevent falls, and avoid assistive devices
D) Focus solely on bed exercises until physical therapy begins

Answer: B) Use a gait belt and assistive device during ambulation

Explanation: Safety during ambulation for stroke patients is paramount. Using a gait belt and assistive devices provides support and stability, reducing fall risk. Encouraging unaided walking prematurely (A) can be unsafe. Limiting walking (C) delays recovery and may lead to deconditioning. Focusing solely on bed exercises (D) neglects mobility goals essential for independence. This question tests knowledge of safety protocols, understanding of rehabilitation principles, and clinical judgment—core components of the CRRN exam.
