Understanding the SOAP Note Framework in Dermatology

Before exploring the sample, it's essential to understand the SOAP note structure—Subjective, Objective, Assessment, and Plan—and how it applies specifically to skin rashes.

Subjective (S): Capturing the Patient's Experience

This section records the patient's personal account of their skin issue. It includes:

- Chief Complaint: The primary reason for the visit, e.g., "red, itchy rash on arms."
- History of Present Illness (HPI): A detailed narrative describing onset, duration, progression, and associated symptoms.
- Past Medical History: Previous skin conditions, allergies, or relevant systemic illnesses.
- Medication History: Current or recent medications, including topical agents.
- Allergy History: Known sensitivities or allergies.
- Social and Environmental Factors: Exposure to new environments, recent travel, or contact with potential allergens.
- Review of Systems (if relevant): To identify systemic symptoms like fever or malaise.

Objective (O): Documenting Clinical Findings

This includes observable and measurable data: - General Appearance: Patient's overall condition. - Vital Signs: Temperature, blood pressure, pulse, respiratory rate. - Inspection of the Skin: Detailed description of the rash. - Palpation Findings: Texture, warmth, tenderness. - Other Relevant Exams: Lymphadenopathy, systemic signs.

Assessment (A): Formulating a Differential Diagnosis

Here, the clinician synthesizes subjective and objective data to arrive at a probable diagnosis or list of differentials: - Primary Diagnosis: The most likely cause of the rash. - Differential Diagnoses: Other conditions that could present similarly. - Diagnosis Rationale: Brief explanation supporting the diagnosis.

Plan (P): Outlining Next Steps

This encompasses: - Management Strategies: Medications, topical or systemic. - Further Investigations: Labs, biopsies, or referrals. - Patient Education: Skin care advice, trigger avoidance. - Follow-Up: When to re-evaluate or see a specialist.

Sample SOAP Note for Skin Rash: A Detailed Illustration

Subjective > Chief Complaint: > "I have a red, itchy rash on my arms that started two days ago." > History of Present Illness: > The patient reports the rash began as small red spots that have since enlarged and become more itchy. No pain reported. The rash appeared suddenly after returning from a camping trip. No previous episodes of similar rashes. The patient notes using a new insect repellent during the trip. No recent changes in laundry detergents or soaps. > Past Medical History: > No chronic illnesses. No known skin conditions. > Medication History: > No regular medications. Occasionally uses over-the-counter antihistamines. > Allergy History: > No known drug or environmental allergies. > Social and Environmental Factors: > Recent outdoor exposure, possible insect bites. No new pets or plants at home. > Review of Systems: > No fever, malaise, or systemic symptoms. No respiratory or gastrointestinal complaints. Objective > General: > Patient appears well, alert, no distress. > Vital Signs: > Temp: 98.6°F (37°C) > BP: 120/78 mmHg > HR: 72 bpm > RR: 16 breaths/min > Skin Examination: > - Location: Bilateral forearms and dorsal hands. > - Appearance: Multiple erythematous, maculopapular eruptions; some coalescing into plaques. > - Distribution: Symmetrical, confined to exposed areas. > - Characteristics: Slight edema, surface appears dry; no vesicles or pustules. > - Other findings: No crusting or oozing. > - Tenderness: Mild on palpation. > - Lymph nodes: No cervical or regional lymphadenopathy. > Additional: > No signs of systemic involvement such as fever or malaise. Assessment > Primary Diagnosis: > Contact dermatitis, likely allergic in origin, possibly due to insect repellent or environmental exposure. > Differential Diagnoses: > - Atopic dermatitis > - Viral exanthem > - Drug eruption > - Urticaria (less likely given the persistent appearance) > Diagnosis Rationale: > The sudden onset after outdoor activity, localized distribution, and history of new product use support allergic contact dermatitis. The absence of systemic

symptoms and the nature of the rash favor this over other differentials. Plan > - Management: > - Initiate low-potency topical corticosteroid (e.g., hydrocortisone 1%) twice daily. > - Recommend oral antihistamines (e.g., loratadine 10 mg daily) for itch relief. > - Advise avoidance of suspected allergens, including insect repellent and potential irritants. > - Further Investigations: > - If no improvement in 7-10 days, consider patch testing to identify specific allergens. > - Educate on skin care: gentle cleansing, moisturizing, avoiding scratching. > - Patient Education: > - Emphasize importance of avoiding known triggers. > - Inform about signs of secondary infection (e.g., increased redness, pus) requiring prompt evaluation. > - Follow-Up: > - Reassess in one week or sooner if symptoms worsen. > - Refer to dermatology if diagnosis remains uncertain or no improvement.
