Understanding Menstruation and Its Significance

What Is Menstruation?

Menstruation, commonly known as a period, is the regular shedding of the uterine lining in women of reproductive age. It occurs as part of the menstrual cycle, which is regulated by hormonal changes involving estrogen and progesterone. This cycle prepares the body for pregnancy each month and typically lasts between 21 to 35 days.

Understanding Your Menstrual Cycle

Before discussing specific signs and experiences, it's important to grasp the basics of the menstrual cycle. On average, a cycle lasts about 28 days, but normal cycles can range from 21 to 35 days. The cycle is divided into several phases:

Phases of the Menstrual Cycle
