Understanding the Electromagnetic Spectrum

The electromagnetic spectrum encompasses all types of electromagnetic radiation, arranged based on their wavelengths and frequencies. This spectrum is a continuum, meaning the boundaries between different types of radiation are not sharply defined but gradually transition from one to another.

Key Characteristics of Electromagnetic Radiation:

- Wavelength (λ): The distance between successive crests of a wave, typically measured in meters.
- Frequency (f): The number of wave cycles that pass a point per second, measured in Hertz (Hz).
- Speed (c): All electromagnetic waves travel at the same speed in a vacuum, approximately 3×10^8 meters per second.

Relationship: $c = \lambda \times f$ This fundamental equation links wavelength and frequency, emphasizing that as wavelength decreases, frequency increases, and vice versa.
