All known living things—from microscopic bacteria to enormous blue whales—are made up of cells. Key points about cells include: - They are the fundamental units of biological organization. - Cells contain genetic material (DNA) that guides their activities. - They carry out various life processes such as metabolism, growth, reproduction, and response to stimuli.

Cell Theory

The cell theory is a fundamental principle in biology that states: - All living organisms are composed of one or more cells. - The cell is the basic unit of structure and function in living organisms. - All cells arise from pre-existing cells through cell division. This theory highlights the importance of cells in biology and underscores their role as the building blocks of life.

Types of Cells: Prokaryotic and Eukaryotic
