The Origins of Jewellery: A Prehistoric Perspective

Early Beginnings and Material Choices

Around 7000 years ago, during the Neolithic period, early humans began crafting jewellery as a form of personal adornment and symbolic communication. Initial materials were sourced from nature—animal bones, shells, stones, and rudimentary metals—reflecting both availability

and the desire to embellish. Key materials used in early jewellery include: - Shells: Carved or drilled for necklaces and bracelets, shells were valued for their shine and symbolism. - Animal Teeth and Bones: Used to create pendants or beads, often signifying hunting prowess or spiritual protection. - Stone and Semi-Precious Minerals: Such as turquoise, malachite, and carnelian, which were shaped into beads or pendants. - Metallic Elements: Early metallurgy introduced copper, which was relatively easy to work with and abundant in regions like the Middle East. The choice of materials was dictated by environmental factors, cultural beliefs, and technological capabilities. For example, copper tools and ornaments became prevalent as metallurgy advanced.
