totalfx fractional co2 laser treatments post procedure are an essential aspect of ensuring optimal healing, skin rejuvenation, and long-term results after your laser treatment. Understanding what to expect, how to care for your skin, and the best practices post-procedure can significantly enhance your recovery process and maximize the benefits of the treatment.

Understanding totalfx fractional co2 laser treatments

What is totalfx fractional co2 laser therapy?

TotalFX fractional CO2 laser therapy is a minimally invasive skin resurfacing treatment designed to address various skin concerns such as wrinkles, scars, sun damage, and uneven skin texture. The procedure uses a laser to create controlled micro-injuries in the skin, stimulating natural collagen production and skin regeneration.

How does it work?

The totalfx device emits fractional CO2 laser beams that target specific areas of the skin, leaving surrounding tissue intact. This fractional approach accelerates healing, reduces downtime, and offers effective results. The laser penetrates into the dermis, promoting collagen remodeling, which results in firmer, smoother, and more youthful skin.

Immediate post-procedure expectations

Common skin reactions

After a totalfx fractional CO2 laser session, it's normal to experience:

1. Redness and swelling
2. Minor discomfort or a sensation similar to sunburn
3. Crusting or peeling as the skin begins to heal
4. Darkening or hyperpigmentation in some cases

Initial care tips

Immediately following the procedure:

1. Keep the skin moisturized with prescribed or recommended ointments.
 - 2> Avoid touching or scratching the treated area to prevent infection.
 - 3> Protect your skin from direct sunlight; use broad-spectrum sunscreen with high SPF.
