Overview of Investigation 2: Objectives and Focus Investigation 2 typically centers around a specific scientific question or set of questions that drive inquiry. For example, if the investigation pertains to properties of matter, students might explore how different materials behave under various conditions. Common objectives include: - Recognizing and describing physical properties of materials (e.g., color,

texture, hardness). - Developing skills in observing, comparing, and classifying materials. - Understanding that materials can change under certain conditions. - Applying scientific language to describe observations. This investigation aims to build foundational knowledge that students can apply to real-world situations and future scientific explorations.

Step-by-Step Breakdown of Investigation 2

1. Introduction and Setting the Stage

The investigation begins with a brief discussion or demonstration to activate prior knowledge. Teachers might prompt students with questions like: - “What materials do you see around you?” - “How can we tell one material from another?” This primes students to observe carefully and think critically about material properties.

2. Planning the Investigation

Students are guided to develop a plan for exploring different materials. This might involve: - Selecting samples of various objects or substances. - Deciding what properties to observe (e.g., color, texture, flexibility). - Determining the tools needed (magnifying glass, weights, etc.). Encouraging students to formulate hypotheses about how materials will behave under certain tests fosters scientific thinking.

3. Conducting Experiments and Making Observations

Students perform systematic tests, such as: - Touch and feel: assessing texture and hardness. - Color observation: noting color variations. - Flexibility tests: bending or stretching materials. - Weight comparisons: using scales or balances. Throughout this process, students record their observations meticulously, often

using data tables or charts. 4. Analyzing Data with iCheck Once data collection is complete, students use iCheck to answer questions related to their observations. These prompts help students:

- Summarize findings.
- Compare properties of different materials.
- Identify patterns or differences.
- Reflect on whether their hypotheses were supported.

This digital assessment consolidates learning and provides immediate feedback, reinforcing understanding. 5. Drawing Conclusions and Applying Knowledge The final phase involves students discussing their findings, drawing conclusions about material properties, and considering practical applications. For example, they might explore:

- Which materials are best suited for specific uses based on properties.
- How understanding material properties helps in everyday life.

Students are encouraged to articulate their reasoning clearly, using scientific vocabulary.
