Understanding Classical

Mechanics: An Overview

Classical mechanics, also known as Newtonian mechanics, is a branch of physics that deals with the motion of bodies under the influence of forces. It forms the foundation for many advanced topics in physics and engineering. Here, we will cover fundamental concepts through a series of one mark questions with answers to aid quick revision.

Key Topics in Classical Mechanics for One Mark Questions

Classical mechanics encompasses several core topics. The following sections highlight common questions and their answers, categorized for clarity.

Basic Concepts and Definitions

1. What is Newton's first law of motion?

Newton's first law states that an object at rest remains at rest, and an object in motion continues in motion with a constant velocity unless acted upon by an external force.

2. Define inertia.

Inertia is the tendency of a body to resist changes in its state of motion or rest.

3. What is momentum?

Momentum is the product of mass and velocity of a body, expressed as $(p = mv)$.

4. State Newton's second law of motion.

Newton's second law states that the force acting on a body is equal to the rate of change of its momentum, $(F = \frac{dp}{dt})$. For constant mass, it simplifies to $(F = ma)$.

5. What is the unit of force?

The SI unit of force is the Newton (N).

Laws of Motion and Applications

1. What is the law of conservation of linear momentum?

The total linear momentum of an isolated system remains constant if no external force acts on it.

2. Define work done by a force.

Work done is the product of force and displacement in the direction of the force, $(W = Fd)$.

3. What is the principle of conservation of energy?

Energy cannot be created or destroyed; it can only be transformed from one form to another.

4. What is the law of conservation of momentum?

The total momentum before and after an interaction remains constant if no external forces act.

5. Define elastic collision.

An elastic collision is one where kinetic energy and momentum are conserved.

Work, Power, and Energy

1. What is kinetic energy?

Kinetic energy is the energy possessed by a body due to its motion, given by $KE = \frac{1}{2}mv^2$.

2. Define potential energy.

Potential energy is stored energy in a body due to its position or configuration.

3. What is the work-energy theorem?

The work done by all forces on a body equals the change in its kinetic energy.

4. What is power?

Power is the rate of doing work, expressed as $P = \frac{W}{t}$.

5. State the units of work and power.

Work is measured in Joules (J), and power in Watts (W).

Center of Mass and Motion

1. Define center of mass.

The point where the entire mass of a body or system can be considered to be concentrated for analyzing translational motion.

2. State the principle of conservation of the center of mass.

The velocity of the center of mass of an isolated system remains constant if no external forces act.

3. What is the velocity of the center of mass?

It is the weighted average of the velocities of all particles in the system, given by $V_{cm} = \frac{\sum m_i v_i}{\sum m_i}$.

4. How does the center of mass move in the absence of external forces?

It moves with constant velocity in a straight line.

Rotational Motion

1. What is moment of inertia?

It is a measure of an object's resistance to changes in its rotational motion, depending on mass distribution relative to the axis of rotation.
