Short-Answer Questions Q3: Explain the difference between nominal GDP and real GDP. Answer: Nominal GDP measures the value of all final goods and services produced within a country using current prices, without adjusting for inflation. Real GDP adjusts for inflation by valuing output at constant prices from a

base year, allowing for comparison of economic growth over time. Q4: What is the natural rate of unemployment, and why is it important? Answer: The natural rate of unemployment is the rate of unemployment when the economy is at full employment, accounting for frictional and structural unemployment. It is important because it represents the baseline level of unemployment that the economy tends to experience without causing inflationary pressures. Essay Questions Q5: Discuss the impact of expansionary fiscal policy on an economy experiencing a recession. Include potential benefits and drawbacks. Answer: Expansionary fiscal policy involves increasing government spending and/or decreasing taxes to stimulate economic activity. During a recession, such measures can boost aggregate demand, increase output, and reduce unemployment. The benefits include short-term economic revival and improved employment levels. However, drawbacks may include increased budget deficits, higher public debt, and potential inflation if the economy overheats. Additionally, if implemented poorly or too late, the policy might lead to crowding out private investment.
