7. **Closure:** Ensuring wound integrity, often self-sealing, with minimal sutures if needed.

Manual Small Incision Cataract Surgery (MSICS)

1. Creating a scleral or clear corneal tunnel incision.
2. Performing capsulorhexis similar to phacoemulsification.
3. Manual expression of the nucleus through the incision, often with a vectis or similar instrument.
4. Cortical cleanup and IOL implantation as in phacoemulsification.
5. Wound closure, which may require sutures depending on incision size and location.

Corneal Transplantation: Penetrating Keratoplasty (PK) and Lamellar Techniques

1. **Donor Tissue Preparation:** Trephining the donor cornea to match recipient size.
2. **Recipient Bed Preparation:** Marking and trephining the recipient cornea to remove diseased tissue.
3. **Graft Placement:** Suturing the donor cornea onto the recipient bed with interrupted or continuous sutures.
