What Is Social Preventive Medicine?

Social preventive medicine is a branch of public health that focuses on the social determinants of health, disease prevention, and health promotion across populations. Unlike clinical medicine, which concentrates on individual diagnosis and treatment, social preventive medicine emphasizes preventive strategies at the community or societal level. It integrates disciplines such as epidemiology, sociology, environmental health, behavioral sciences, and health policy to address the root causes of health issues.

Core Objectives of the Department of Social Preventive Medicine:

1. Disease Prevention: Reducing the incidence and prevalence of diseases through proactive measures.
