Classification is the method by which scientists organize and categorize living organisms based on shared characteristics, evolutionary relationships, and genetic information.

What is Biological Classification?

Biological classification is a systematic process that groups organisms into hierarchical categories. This process helps scientists understand the diversity of life, trace evolutionary lineages, and communicate effectively about different species. Key points about biological classification: - Organizes living organisms into groups such as kingdoms, phyla, classes, orders, families, genera, and species. - Facilitates identification and study of organisms. - Reflects evolutionary relationships, often depicted through phylogenetic trees.
