Fetal Pig as a Model for Mammalian Anatomy Why Use Fetal Pigs in Education? Fetal

pigs are commonly used in biology classrooms because:

- They share many anatomical features with humans
- They are relatively easy to obtain and handle
- Their organs and systems are well-developed, providing clear insights into mammalian anatomy
- They allow for hands-on learning about internal structures

Key Features of the Fetal Pig -

External features such as limbs, tail, and snout - Well-developed organ systems:

circulatory, respiratory, digestive, reproductive, and excretory - Presence of a placenta during the fetal stage

Packet Answers: Common Questions About Fetal Pigs as Placental Mammals

1. What are the major external features of a fetal pig? Answer:

- Snout: Used for digging and sensing
- Lips: Surround the mouth
- Ears: Pinnae or external ears

- Limbs: Forelimbs and hindlimbs with toes
- Tail: Short tail at the posterior end

- Umbilical cord: Connects the fetus to the placenta (visible in fetal stages)
- Genital papilla: External reproductive organ (especially in females)

2. What are the primary internal organ systems in a fetal pig? Answer:

- Digestive system: mouth, esophagus, stomach, intestines, liver, pancreas
- Circulatory system: heart, blood vessels

- Reproductive system: ovaries, uterus (females), testes (males)

- Excretory system: kidneys, bladder
- Nervous system: brain, spinal cord, nerves

3. How does the fetal pig's circulatory system differ from that of an adult pig?

Answer:

- The fetal pig's circulatory system includes structures like the foramen ovale (a hole in the heart's atrial septum) and the ductus arteriosus (a blood vessel connecting

the pulmonary artery to the aorta). These allow blood to bypass the lungs, which are not yet functional. - After birth, these structures close as the pig begins to breathe air and the circulatory system adjusts to postnatal life.

4. What is the function of the placenta in a fetal pig? Answer: The placenta is a vital organ that connects the developing fetus to the mother. Its functions include: - Facilitating the exchange of oxygen and nutrients from mother to fetus - Removing carbon dioxide and waste products from the fetus - Producing hormones to maintain pregnancy

5. Describe the digestive process in a fetal pig. Answer: - Food enters through the mouth and moves down the esophagus - The stomach begins digestion with acids and enzymes - The small intestine absorbs nutrients - The liver produces bile to aid digestion - The pancreas secretes digestive enzymes - Waste moves into the large intestine for water absorption and eventual excretion

6. What are the main reproductive differences between male and female fetal pigs? Answer: - Males: Testes located near the kidneys, penis present externally - Females: Ovaries located near the kidneys, uterus present, and the genital papilla is visible externally
