Sample WAEC Geography Questions and Model Answers

Below are some typical questions with comprehensive answers to guide your preparation.

Question 1: Describe the main features of the Earth's movements and explain their effects on the climate.

Answer:

The Earth's movements include rotation and revolution, which significantly influence climate and weather patterns globally.

1. **Rotation:** The Earth rotates around its axis once every 24 hours. This movement causes day and night. The rotation results in the apparent movement of the Sun across the sky, influencing the pattern of daylight hours.
2. **Revolution:** The Earth orbits the Sun in an elliptical path once every approximately 365.25 days. This revolution, combined with the tilt of the Earth's axis (about 23.5°), leads to the changing seasons.

Effects on Climate:

1. **Seasons:** The tilt causes variations in solar radiation received at different locations, creating seasons such as summer and winter in temperate zones and wet and dry seasons in the tropics.
2. **Day Length:** Rotation influences the length of day and night, affecting temperature and weather conditions.
3. **Climate Zones:** The position of the sun during revolution determines the distribution of climate zones across the globe.

Question 2: Explain the factors influencing the distribution of rainfall

in West Africa.

Answer:

Rainfall distribution in West Africa is influenced by a combination of geographical, atmospheric, and oceanic factors.

Main factors include:

1. **Location and Latitude:** Areas near the equator, such as the Guinea Coast, receive more rainfall due to the Intertropical Convergence Zone (ITCZ) bringing moist air.
2. **Prevailing Winds:** The south-west trade winds bring moisture from the Atlantic Ocean, causing heavy rainfall in coastal regions.
3. **Ocean Currents:** The warm Guinea Current enhances rainfall along the coast, while cold currents like the Benguela reduce rainfall inland.
4. **Relief and Topography:** Mountains like the Guinean Highlands force moist air to rise, leading to orographic rainfall, especially on the windward slopes.
5. **Seasonal Winds and Monsoons:** The West African Monsoon, driven by changes in wind patterns, brings rainfall during the rainy season, typically from May to October.

Question 3: Draw and label a simple sketch map showing the distribution of vegetation zones in Nigeria.

Model Answer:

(While I can't draw here, a typical answer would include a sketch map of Nigeria divided into different vegetation zones, such as:

1. Guinea Savannah in the north
2. Rainforest in the south
3. Mangrove swamps along the coast

Label the zones appropriately, indicating the general north-south gradient.

Sample Common WAEC Geography Questions and Model

Answers

To illustrate the exam's scope and expectations, here are some typical questions along with analytical insights into their answers.

Question 1: Define "Climate" and explain its major components.

Model Answer: Climate refers to the long-term average of weather conditions experienced in a particular area over an extended period, typically 30 years or more. It encompasses patterns of temperature, rainfall, humidity, wind, and sunshine. Major Components: - Temperature: The degree of warmth or coldness, influencing ecosystems and human activities. - Precipitation: Rainfall or snowfall, vital for agriculture and water resources. - Humidity: The amount of moisture in the air, affecting comfort and weather phenomena. - Wind: Air movement that influences weather patterns and climate zones. - Sunshine: The amount of solar radiation received, impacting temperature and photosynthesis. Analytical note: A detailed answer demonstrates understanding by linking components to their effects on the environment and human life.

Question 2: Describe the process of river meander formation.

Model Answer: River meanders are sinuous bends or curves in a river channel, formed through erosion and deposition processes over time. Formation Process: - Initial Bends: Slight irregularities in the riverbed cause water to flow faster on the outer banks and slower on the inner banks. - Erosion: The faster-moving water erodes the outer banks, creating river cliffs. - Deposition: Sediments

are deposited on the inner banks where flow velocity decreases, forming point bars. - Erosion and Deposition Cycle: This cycle accentuates the bends, causing meanders to become more pronounced. - Migration: Over time, meanders migrate downstream and may eventually form oxbow lakes if cut off. Analytical note: Using diagrams to illustrate meander formation enhances clarity and demonstrates comprehension.
