It is mandatory for most new constructions, alterations, or additions to existing buildings.

2. Building Code

The Building Code, part of the New Zealand Building Act, sets the performance standards for building work, including structural integrity, fire safety, sanitation, and accessibility. Compliance with the Building Code ensures buildings are safe, healthy, and durable.

3. Structural Frame

The structural frame refers to the primary load-bearing elements of a building, such as columns, beams, and load-bearing walls, that support the building's weight and resist environmental forces like wind and earthquakes.

4. Cladding

Cladding is the external material applied to the exterior of a building to provide weather resistance, insulation, and aesthetic appeal. Common cladding materials include timber, metal, brick, and fiber cement.

5. Foundation

The foundation is the part of the building that transfers loads from the structure to the ground. Types include shallow foundations (like slabs and footings) and deep foundations (like piles).

Construction and Design Terms

1. Building Permit

A building permit is a document issued prior to construction that authorizes specific building work, ensuring it adheres to approved plans and complies with relevant standards.

2. Design Drawings

3. Building Envelope

The building envelope encompasses all elements that separate the interior from the exterior environment, including walls, roofs, windows, and doors, impacting energy efficiency and weatherproofing.

4. Insulation

Insulation materials are installed within walls, ceilings, and floors to reduce heat transfer, improving energy efficiency and comfort.

5. Load-Bearing Wall

A load-bearing wall supports structural loads from the roof, floors, or upper levels, transferring these loads to the foundation.

Materials and Components

1. Timber

Timber refers to processed wood used as a building material, valued for its strength, versatility, and sustainability.

2. Concrete

Concrete is a composite material made of cement, aggregate, water, and admixtures, used extensively for foundations, walls, and floors.

3. Steel Reinforcement

Steel reinforcement, or rebar, is embedded within concrete to improve tensile strength and prevent cracking.

4. Roofing Materials

Roofing materials include tiles, metal sheets, membranes, and shingles, each selected for durability, aesthetics, and climate suitability.

5. Finishes

Finishes are the final surface treatments applied to walls, floors, and ceilings, such as paint, wallpaper, tiles, or varnish.

Construction Processes and Phases

1. Site Preparation

Site preparation involves clearing, leveling, and excavating the site to prepare for foundation work.

2. Excavation

Excavation is the process of moving earth to create space for foundations, basements, or utilities.

Legal and Regulatory Terms

1. Building Warrant of Fitness (BWOF)

A BWOF is a certificate issued annually confirming that essential building systems (like fire alarms and lifts) are maintained and compliant.

2. Code Compliance Certificate (CCC)

A CCC indicates that building work has been inspected and complies with the Building Code, allowing the owner to occupy the building.

3. Inspection

Inspections are checks carried out at various stages of construction to ensure compliance with plans and standards.

4. As-Built Drawings

As-built drawings are revised plans showing the actual construction details, including any changes made during the building process.

5. Variations

Variations refer to changes or deviations from the original approved plans, which often require approval and documentation.

Specialized Terms in Building Sectors

1. Earthquake Resilience

Earthquake resilience involves design and construction practices aimed at minimizing damage and ensuring safety during seismic events, especially relevant in New Zealand's seismic zone.

2. Sustainable Building

A sustainable building minimizes environmental impact through energy efficiency, use of renewable resources, and sustainable materials.
