Key Digital Printing Terminology

1. Digital Printing

Digital printing refers to the process of creating printed images directly from digital files without the need for physical plates or setups. It encompasses various technologies like inkjet and electrophotography, enabling high-resolution output with minimal setup time.

2. Label Materials

This term covers the substrates used for printing labels, including:

1. **Facestock:** The top layer of the label that bears the design and information.
2. **Adhesive:** The sticky substance enabling the label to adhere to surfaces.
3. **Liner:** The backing paper or film that supports the facestock during printing and application.

3. Variable Data Printing (VDP)

VDP allows for the customization of individual labels or packages within a print run, such as unique serial numbers, QR codes, or personalized messages. This technique is ideal for targeted marketing and product authentication.

4. Resolution and DPI

Resolution, measured in dots per inch (DPI), indicates the sharpness and clarity of the printed image. Higher DPI values (e.g., 1200 DPI) produce more detailed and vibrant prints, which are crucial for high-quality labels.

5. Color Management

This encompasses the processes and software used to ensure color accuracy and consistency across different prints and devices. Color management systems calibrate devices and utilize color profiles (ICC profiles) to achieve predictable results.

6. Substrate Compatibility
