What Is Radar? An Overview

Radar, an acronym for Radio Detection and Ranging, is a system that uses radio waves to detect, locate, and sometimes identify objects at a distance. The basic principle involves transmitting electromagnetic waves, which reflect off objects (targets), and then receiving and analyzing the echoes to determine various target characteristics.

The Fundamental Concept

1. **Transmission:** A radar system emits high-frequency radio waves via an antenna.
2. **Reflection:** These waves bounce off objects in the environment.
3. **Reception:** The system detects the reflected signals.
4. **Processing:** The received signals are processed to extract information like range, velocity, and angle.

This cycle enables radars to "see" beyond the line of sight, making them an essential tool in surveillance, navigation, and tracking.
