existing features. - Performance Testing: Measures application

responsiveness and stability under load. - Automation Testing:

Automates repetitive testing tasks. 4. Explain the role of the Test Builder in OATS. Answer: Test Builder is a user-friendly interface in OATS used to create, edit, and manage automated test scripts without extensive programming knowledge. It allows testers to develop scripts visually by recording user actions or manually designing test steps. Intermediate Level Questions 5. How does Oracle Functional Testing (OFT) automate testing processes? Answer: OFT automates testing by recording user interactions with applications or by creating scripts manually. These scripts can be parameterized for data-driven testing, scheduled for execution, and integrated into test plans. OFT supports object recognition, synchronization, and checkpoints to validate application behavior during test execution. 6. Describe the process of creating a test script in OATS. Answer: - Use the Test Recorder or Test Builder to record user actions on the application. - Identify and enhance objects for reliable recognition. - Insert checkpoints to validate expected outcomes. - Parameterize data inputs for reusability. - Save and organize the script for execution. 7. What is a checkpoint in OATS, and how is it used? Answer: A checkpoint is a validation point within a test script that verifies whether specific data or UI elements meet expected conditions during test execution. Checks can include text verification, image verification, or object property validation, ensuring application correctness. 8. How does OATS handle data-driven testing? Answer: OATS supports data-driven testing through its Data Manager, allowing testers to input multiple sets of data from external sources like Excel, CSV, or databases. Scripts can be parameterized to run multiple iterations with different data inputs, enhancing test coverage. Advanced Level Questions 9.

Explain the concept of object recognition in OATS and its importance. Answer: Object recognition involves identifying UI elements in the application under test during script execution. OATS uses object properties, images, or both to reliably recognize objects. Proper object recognition ensures scripts are stable and less prone to breakage due to UI changes.

10. How do you handle dynamic objects in OATS? Answer: Dynamic objects change properties frequently, making recognition challenging. To handle them, testers can:
