

FUNDAMENTALS OF FUTURES AND OPTIONS MULTIPLE CHOICE

Fundamentals of Futures and Options Multiple Choice

Understanding the fundamentals of futures and options is essential for investors, traders, and financial analysts alike. These derivative instruments are widely used for hedging risks, speculating on price movements, and enhancing portfolio strategies. Multiple choice questions (MCQs) serve as an effective tool for testing knowledge and comprehension of these complex financial products. This article delves into the core concepts of futures and options, explores typical MCQ formats, and provides guidance on mastering these questions for academic and practical purposes.

Overview of Futures and Options

What Are Futures Contracts?

Futures contracts are standardized legal agreements to buy or sell a specific quantity of an underlying asset at a predetermined price on a future date. They are traded on organized exchanges and are used primarily for hedging and speculation.

Key Features of Futures Contracts

1. **Standardization:** Contract terms, including size and delivery date, are predefined by the exchange.
2. **Margin Requirements:** Traders must maintain a margin account to cover potential losses.
3. **Mark-to-Market:** Daily settlement process adjusts gains and losses.
4. **Obligation:** Both parties are obligated to fulfill the contract at expiration.

What Are Options Contracts?

Options provide the right, but not the obligation, to buy or sell an underlying asset at a specified strike price before or at expiration. They are categorized as call options (buy rights) and put options (sell rights).

Key Features of Options Contracts

1. **Premium:** The price paid upfront to acquire the option.
2. **Strike Price:** The fixed price at which the underlying can be bought or sold.
3. **Expiration Date:** The last date the option can be exercised.
4. **Rights vs. Obligations:** Buyers have rights; sellers have obligations if the option is

exercised.

Differences Between Futures and Options

Understanding the distinctions is crucial for effective application and MCQ comprehension.

Obligation vs. Rights

- Futures contracts impose an obligation on both parties. - Options grant a right to the buyer but impose an obligation only on the seller if the option is exercised.

Risk and Reward Profiles

- Futures have theoretically unlimited profit and loss potential. - Options limit the maximum loss to the premium paid but offer asymmetric profit potential.

Usage and Strategies

- Futures are often used for hedging and speculative trading with direct exposure. - Options facilitate more complex strategies like spreads, straddles, and protective puts/calls.

Multiple Choice Questions (MCQs) on Futures and Options

Purpose and Structure of MCQs

MCQs assess knowledge, comprehension, and application skills. They typically consist of a question stem followed by multiple answer choices, with only one correct answer.

Common Types of MCQs in Futures and Options

1. **Definition-based questions:** Test understanding of basic concepts.
2. **Application questions:** Present scenarios requiring application of concepts.
3. **Comparison questions:** Differentiate between futures and options or other derivatives.
4. **Calculation-based questions:** Involve computations like profit/loss, payoff diagrams, or margin requirements.

Sample MCQs and Explanations

Question 1: What is the primary difference between a futures contract and an options contract?

1. A) Futures give the right, options give the obligation
2. B) Futures involve obligations for both parties, options give rights only to the buyer
3. C) Futures are traded over-the-counter, options are exchange-traded
4. D) Futures always require physical delivery, options never do

Correct Answer: B

Explanation: Futures contracts obligate both parties to fulfill the contract at expiration, whereas options give the buyer the right but not the obligation to buy or sell the asset.

Question 2: If an investor purchases a call option with a strike price of \$50 and the underlying stock rises to \$60 at expiration, what is the profit (excluding premium)?

1. A) \$10
2. B) \$0
3. C) \$60
4. D) \$50

Correct Answer: A

Explanation: The intrinsic value of the call is $\$60 - \$50 = \$10$. The profit depends on the premium paid, but ignoring premium, profit equals intrinsic value.

Question 3: Which of the following statements is true regarding margin in futures trading?

1. A) Margin is a down payment made to purchase the underlying asset
2. B) Margin is the initial deposit required to open a futures position, serving as a performance bond
3. C) Margin is paid only if the market moves against the trader
4. D) Margin is the total value of the futures contract
