Question 1: What is the primary function of a PLC in industrial automation?

- A. To replace human operators entirely
- B. To automate control processes by executing programmed logic
- C. To provide power to industrial machinery
- D. To store inventory data

Correct Answer: B. To automate control processes by executing programmed logic

Explanation:

A PLC (Programmable Logic Controller) is designed to automate control processes by executing user-defined logic. It continuously monitors inputs, processes logic based on its program, and updates outputs accordingly. Unlike options A, C, or D, its core purpose is to facilitate automation in industrial settings.

Question 2: Which programming language is most commonly used for ladder logic programming in PLCs?

- A. Structured Text
- B. Ladder Diagram
- C. Function Block Diagram
- D. Sequential Function Chart

Correct Answer: B. Ladder Diagram

Explanation:

Ladder Diagram (LD) is the most widely used programming language for PLCs, especially in industrial environments. It

visually resembles relay logic schematics, making it accessible for electricians and control engineers. While other languages like Structured Text and Function Block Diagram are also supported, Ladder Logic remains the standard.

Question 3: In a PLC scan cycle, which process occurs first?

- A. Output updating
- B. Input processing
- C. Program execution
- D. Communication with external devices

Correct Answer: B. Input processing

Explanation:

The typical PLC scan cycle begins with reading all inputs, then executing the control program based on those inputs, and finally updating outputs. This sequence ensures that the program always acts on the latest input data, maintaining system integrity.

Question 4: Which of the following is an example of a timer function in PLC programming?

- A. To count the number of parts produced
- B. To delay actions for a specified period
- C. To compare two values
- D. To reset a system

Correct Answer: B. To delay actions for a specified period

Explanation:

Timers in PLCs are used to introduce delays or measure durations. For instance, a timer can delay turning on a motor or wait for a process to stabilize before proceeding. Counters, on the other hand, count occurrences, which is different from timers.

Question 5: What does a "fault LED" typically indicate on a PLC?

- A. The program is running smoothly
- B. There is an error or fault in the system
- C. The PLC is in sleep mode
- D. The system has completed its cycle
