- Offer solutions that are feasible and efficient

Components of a Mathematical Model

A typical mathematical model includes:

- Variables: quantities that can change and are involved in the problem
- Constants: fixed values that influence the system
- Equations or inequalities: relationships between variables
- Assumptions: simplifications made for the model to be manageable

Context and Objectives of Activity 4 1C

Educational Context

Activity 4 1C is designed for students to engage actively with the process of creating and analyzing mathematical models. It encourages them to:

- Recognize real-world problems that can

be modeled mathematically - Develop skills in formulating models based on given scenarios - Analyze and interpret the results of their models - Communicate findings effectively
