Critical concepts include: - Types of fertilization (external and internal) - Stages of embryonic development - Cleavage patterns (holoblastic, meroblastic) - Gastrulation and formation of germ layers - Significance of metamorphosis in animals like insects and amphibians

Evolution and Adaptation

Evolutionary biology explains the origin and diversification of animals. Students should understand: - Darwin's theory of natural selection - Evidence from fossils, comparative anatomy, and embryology - Adaptive features that enable survival in various habitats - Evolutionary trends such as cephalization and segmentation

Ecology and Environment
