Sample Review Questions and Answers for the FBISD Spring Biology Pre-AP Exam

Below are several sample questions along with detailed answers to illustrate the types of questions you may encounter and how to approach them.

Question 1: Cell Membrane Transport

Q: Describe the process of active transport across a cell membrane and provide an example. A: Active transport is a cellular process that moves molecules against their concentration gradient, from an area of low concentration to high concentration. This process requires energy, usually in the form of ATP. An

example is the sodium-potassium pump, which maintains cellular ion balance by transporting sodium ions out of the cell and potassium ions into the cell.

Question 2: Mendelian Genetics

Q: In pea plants, the allele for purple flowers (P) is dominant over the allele for white flowers (p). What is the probability that two heterozygous plants (Pp x Pp) will produce a homozygous dominant (PP) offspring?

A: Using a Punnett square:

P	p
P	PP
p	Pp
p	Pp
p	pp

 | The probability of PP is 1 out of 4, or 25%.

Question 3: Ecosystem Dynamics

Q: Explain how energy flows through an ecosystem and identify the role of producers. A: Energy flows through an ecosystem in a one-way stream starting with producers (such as plants and algae) that convert sunlight into chemical energy via photosynthesis.

Consumers (herbivores, carnivores) then obtain energy by eating producers or other consumers.

Decomposers break down organic material, recycling nutrients. Producers are the foundation of the energy pyramid, capturing energy from sunlight and supporting all other organisms.

Question 4: Human Body Systems

Q: How does the respiratory system work with the circulatory system to supply oxygen to body tissues?

A: The respiratory system brings oxygen into the lungs, where it diffuses into the bloodstream through alveoli. Hemoglobin in red blood cells binds to oxygen and transports it via the circulatory system to tissues. Carbon dioxide, a waste product, is carried back to the lungs for exhalation, maintaining gas exchange and homeostasis.

Reviewing Lab and Data Interpretation Skills

The FBISD Spring Biology Pre-AP Exam often includes questions requiring analysis of experimental data or lab procedures.

Tips for Data Analysis

- Practice interpreting graphs and tables, noting trends and anomalies.
- Understand experimental controls and variables.
- Be able to draw conclusions based on data presented.

Sample Data Question

Q: A graph shows the rate of photosynthesis at different light intensities. The rate increases with light intensity up to a point, then plateaus. Explain why this occurs. A: Initially, increasing light intensity provides more energy for photosynthesis, so the rate increases. However, beyond a certain point, other factors such as enzyme activity or carbon dioxide availability become limiting, causing the rate to plateau despite further increases in light intensity.

Final Tips for Success on the FBISD Spring Biology Pre-AP Exam

- Start studying early to avoid last-minute cramming.
- Use a variety of resources—books, videos, practice questions.
- Focus on understanding rather than memorization; apply concepts to different scenarios.
