Understanding Personology: From Individual to Ecosystem

What is Personology?

Personology is the scientific study of personality, behavior, and the various factors that influence human development. It combines insights from psychology, sociology, anthropology, and ecology to understand how individuals grow, adapt, and interact within their environments. The goal is to develop a comprehensive picture of a person's life trajectory, considering biological, psychological, social, and environmental influences.

The Evolution of Personology

Historically, the study of personality focused primarily on individual traits and internal processes. Over time, scholars recognized the importance of contextual factors—such as family, community, and societal structures—in shaping behavior. This shift led to a broader perspective called "personology from individual to ecosystem," which emphasizes the dynamic relationship between an individual and their surrounding environment.
