Sample 2011 MCAS Physics Open Response Questions and Strategies

Sample Question 1: Motion and Forces

Scenario: A student pushes a box across a rough surface with a constant force. The box accelerates uniformly. Sample Question: Describe the forces acting on the box and explain how these forces affect its motion. Include a diagram if necessary and support your explanation with relevant physics principles. Approach to Answering:

- Identify forces: applied force, friction, gravity, and normal force
- Use Newton's Second Law ($F_{\text{net}} = ma$) to relate forces to acceleration
- Explain how friction opposes motion and influences acceleration
- Draw free-body diagrams illustrating the forces

Connect the force analysis to the observed motion

Sample Question 2: Energy and Work

Scenario: A roller coaster car descends from a height, converting potential energy to kinetic energy.

Sample Question: Explain how energy transformations occur in this scenario. Calculate the speed of the coaster at the bottom of the hill given initial height and mass. Approach to Answering: - State the conservation of mechanical energy - Write the potential energy ($PE = mgh$) and kinetic energy ($KE = \frac{1}{2}mv^2$) - Set initial potential energy equal to the kinetic energy at the bottom - Solve for velocity: ($v = \sqrt{2gh}$) - Include units and discuss assumptions (e.g., neglecting friction)
