Understanding the Male Reproductive System The male reproductive system is designed primarily for the production, maturation, and transportation of sperm, as well as the secretion of male hormones such as testosterone. Its functions are integral to human reproduction and sexual health. Key

Components of the Male Reproductive System - Testes

(Testicles): Responsible for sperm production and

testosterone secretion. - Epididymis: Stores mature sperm and

facilitates their motility. - Vas Deferens: Transports sperm

from the epididymis to the urethra. - Seminal Vesicles:

Produce seminal fluid that nourishes sperm and enhances

motility. - Prostate Gland: Secretes fluid that forms part of semen, aiding sperm viability. - Urethra: Conducts semen and urine out of the body through the penis. - Penis: Organ for sexual intercourse and urination.

Functions of the Male Reproductive System

1. Sperm Production: Occurs in the testes through a process called spermatogenesis.
2. Hormone Secretion: Primarily testosterone, which influences male secondary sexual characteristics.
3. Sperm Maturation and Storage: In the epididymis.
4. Semen Production: Combining sperm with fluids from seminal vesicles, prostate, and bulbourethral glands.
5. Delivery of Sperm: During ejaculation through the urethra and penis.

Understanding the Female Reproductive System

The female reproductive system is designed for ovulation, fertilization, pregnancy, and childbirth. It also plays a role in hormone production, including estrogen and progesterone.

Key Components of the Female Reproductive System

- Ovaries: Produce eggs (ova) and secrete hormones like estrogen and progesterone.
- Fallopian Tubes: Transport eggs from the ovaries to the uterus; site of fertilization.
- Uterus (Womb): Houses and nurtures the developing fetus during pregnancy.
- Cervix: The lower part of the uterus, opening into the vagina.
- Vagina: Acts as the canal for childbirth, menstrual flow, and sexual intercourse.
- External Genitalia (Vulva): Includes labia, clitoris, and other structures.

Functions of the Female Reproductive System

1. Ovulation: Release of mature eggs from the ovaries.
2. Fertilization: Union of sperm and egg usually occurs in the fallopian tubes.
3. Pregnancy Support: Uterus provides an environment for fetal development.
4. Hormone Secretion: Estrogen and progesterone regulate menstrual cycles, pregnancy, and secondary sexual

characteristics. 5. Menstruation: Shedding of the uterine lining if fertilization does not occur.
